

Figure 1. Talon Zone 2011 Surface IP Inversion Models (chargeability) oriented in 3D (looking northwest) along with drill holes showing gold intercepts + 0.5 gpt Au (red bar plots). Anomaly 1 is continuous across all 4 IP lines and is spatially associated with mineralization on lines 1 and 2. Anomaly 2 is present on lines 1 and 2. Lines 3 and 4 did not extend far enough south to detect anomaly 2.
